

Through your BaaS subscription we will ensure your Hipster stays happy through out its life time and we ensure it will never end up in landfill. We do need you to help keep it in tip top condition and producing exceptional coffee by following the following routine.

## DAILY

- Run a pre heat cycle (2.3 - 2.4 ltr into thermos) allow to stand for 5 minutes before brewing your first amazing batch brew of the day.
- Before running a cold brew cycle with coffee run a cycle with just water to help cool the machine.
- Rinse your thermos with water between each new brew.
- Daily clean of the exterior parts, accessories, filter basket and thermos using warm water and a gentle dish washing liquid. Do rinse the thermos well.
- Wipe the outer housing and drip tray with a soft damp cloth and dry thoroughly.

## WEEKLY

- Deep clean thermos and rinse through thoroughly. We recommend URNEX (or similar) for this weekly clean.

## MONTHLY

- Release the stainless steel shower head (as per your HIPSTER user manual p29) and soak, removing any limescale and other debris.
- We recommend URNEX or other similar cleaner.
- If the machine will be standing unused for two weeks or more, please shut off the water to the machine and run a cold recipe. This will ensure the machine is purged of any water. When switched back on please run a Hot recipe before you begin brewing.
- If machine is not used for more than 2 days please purge water through the water filter.
